

# ANTI-EPILEPTIC DOSING CHART

Patient leaflet for introducing anti-epileptic medication for children

Your child has been started on an anti-epileptic medication.

This medication will be started at a low dose and this will be slowly increased over a period of weeks until a maintenance dose is reached.

Starting at a low dose helps to reduce or avoid side effects when starting this medication and is important for some anti-epileptic medications where there is a risk of developing an allergic skin rash.

Medication	Medication Strength	START Date	Morning Dose	Midday Dose	Teatime Dose	Bedtime Dose

**Read this leaflet and discuss any questions you have about your medicines with your doctor or pharmacist.**
